It can be difficult tracking **lots of temporary staff** with varied shift patterns — knowing who is on site and **the hours they've worked**

This is **especially true** when time and attendance systems use simple **signing-in books, punch cards** or **swipe cards**

Biometric systems are **more accurate** because the employee has to be there **in person** — this **stops colleagues sharing cards** or signing each other in and it's also useful for **health and safety**

Most biometric systems are based on external features like the **iris** or **fingerprint** but this raises **privacy issues**. Some European countries **forbid the use of fingerprint systems** for time and attendance

VEINID IS DIFFERENT

Using vein patterns in the finger, it provides **fast and accurate** matching **without privacy issues**. It is also portable and easy to use

Hitachi works with leading providers like **Humanforce Workforce Management** who, several years ago, **linked VeinID** to their excellent **workforce management software**

CASE STUDY

Royal Ascot

There are many **large-scale events** in London and they don't come much more **prestigious** than the annual **Royal Ascot** race meeting.

Royal Ascot is attended by more than **300,000 people** over five days and more than **2,000 temporary staff** are taken on for the event

Sodexo, caterers for Royal Ascot for the past 15 years, turned to **Humanforce in 2016** to manage staff time and attendance

This resulted in **reduced costs, better staff management, more accurate time tracking** and **fewer absences** and **disputes**.
