

SOLUTION PROFILE

Accelerate Biometric Innovation

With our unique biometric
identity platform

Globally, the number of online banking users is expected to reach **3.6 billion by 2024**. As the number of users increases, so does the need for reliable account security and customer authentication, to prevent fraud and cyber-crime.

The Hitachi Model

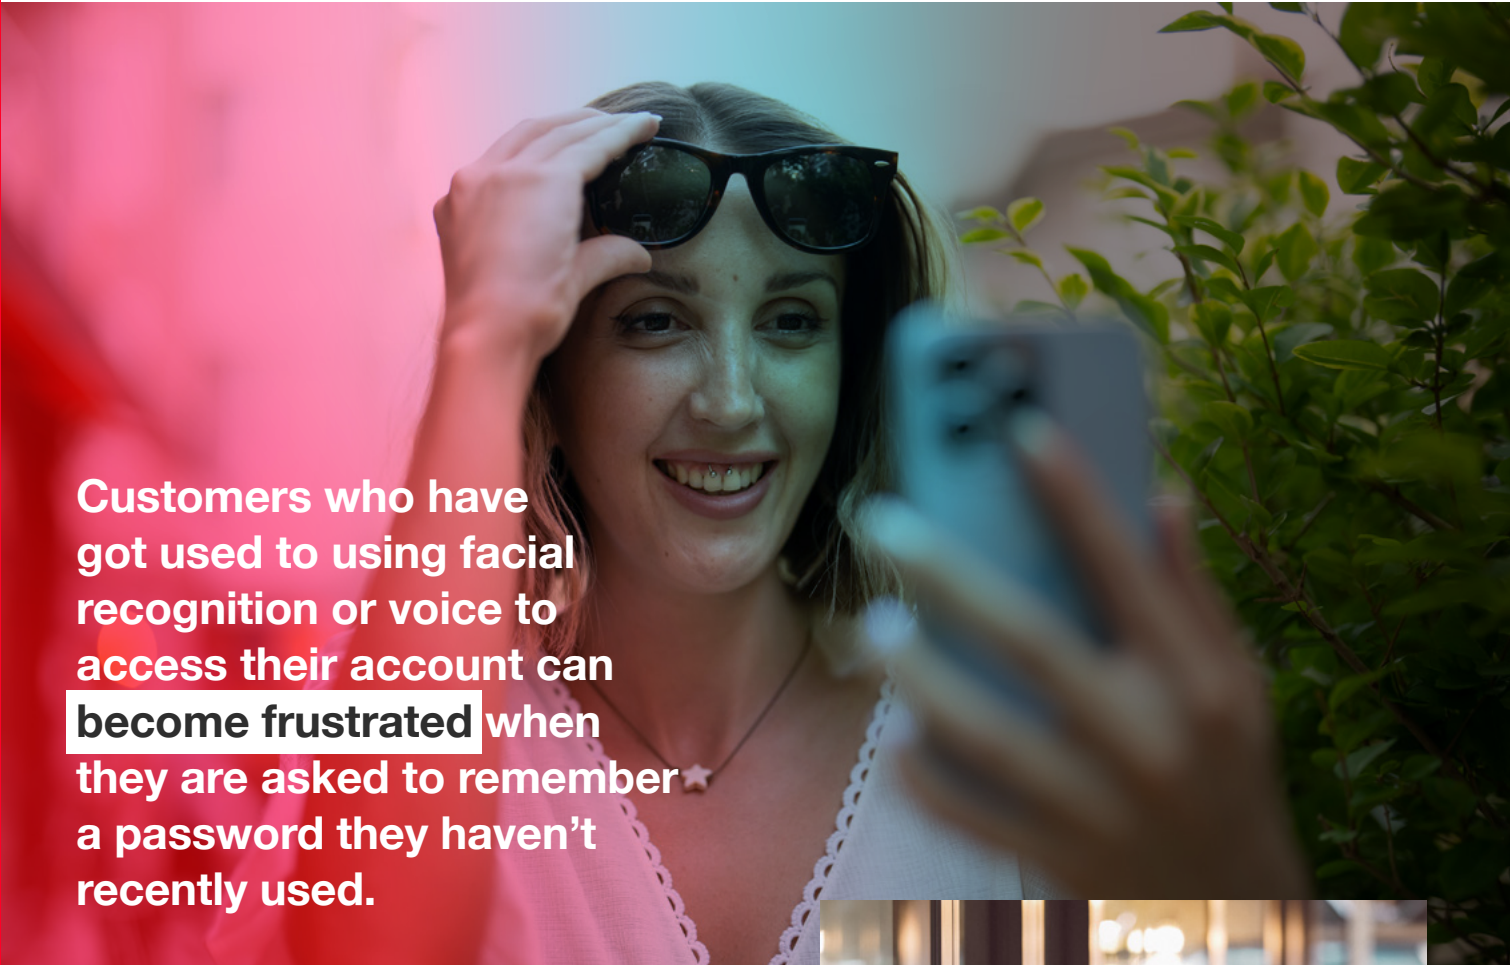

**Accelerate biometric innovation
With our unique biometric
identity platform**

Biometrics offer a safe and convenient solution, but too often banks are using biometrics tactically, rather than as a strategic enabler to greater innovation.

At Hitachi Security Business Group, our portfolio of leading solutions is designed to change the way you think about biometrics and bring customer experience, security and innovation together to offer you a secure, frictionless experience across your operations.

Customers who have got used to using facial recognition or voice to access their account can become frustrated when they are asked to remember a password they haven't recently used.

Manage your biometric data compliantly and effectively

If you have deployed multiple biometrics solutions from various providers across your organisation it can become more difficult to provide a consistent experience for users and manage the silos of data they generate.

This complexity can reduce internal trust in the technology and lead to traditional PIN and passwords being used as a back-up which weakens security. Customers who have got used to using facial recognition or voice to access their account can become frustrated when they are asked to remember a password they haven't recently used. We can help you remove this friction and improve confidence.

No matter what technology or provider you use, we can bring your biometrics ecosystem together and help you manage your data more effectively, so you have the visibility and control you need to accelerate innovation.

Our unique Biometric Identity Solutions, enable you to **easily manage multiple biometrics and confidently provide a consistent level of authentication across your organisation.**

A unique platform to deliver biometric identity

You dictate the best way to authenticate them to the correct level for the task or transaction they need to perform. We do not store the biometric pattern but use this to generate a highly secure token, similar to that used in Public Key Infrastructure which is encrypted and can be store securely.

By providing the technology and expertise we can support your entire biometrics ecosystem and ensure that all data is safe, compliant and secure, helping you meet standards such as GDPR.

Accelerate your security with our biometrics solutions

With technology and expertise, Hitachi Security Business Group can help you to manage risk across your biometrics and use data to deliver meaningful outcomes.

We have been involved in high-quality biometric authentication for over 20 years with our Finger Vein technology which has been implemented across Asia, America, Africa and Europe, by customers such as Barclays, Société Générale, Bank Intesa and many others. Our skilled experts will work in partnership with you, wherever you are on your biometric journey and help you achieve your business outcomes.

About us

Hitachi Security Business Group leverages more than a century in Operational Technologies and over 60 years in Information Technologies.

We are committed to helping achieve a sustainable world and people's well-being by utilizing our breadth of digital and green technologies.

We are working to connect solutions within Energy and Mobility, both physically and digitally, to deliver net-zero.
